Physical Activity Rule

Hyperglycaemia in Type 1 Diabetes

Glucose level of more than 10 mmol/L

1. Bolus insulin within 4 hours¹
2. Blood ketones <0.6 mmol/L (insulin pump), or <1.5 mmol/L (insulin injections)²

20 minutes of physical activity

Drop ~2 mmol/L³

Education

- Avoid this approach before breakfast
- At the discretion of the person living with diabetes

Safety Profile

- <2% risk of hypoglycaemia
- Very low chance of glucose rising
- Any type of physical activity
